

Do you understand the impact of the Carbon Reduction Commitment legislation on your business?

We have been in dialogue with government on behalf of manufacturers since the Carbon Reduction Commitment was first proposed.

Building on this, and our experience of the EU Emissions Trading Scheme, Climate Change Agreements, carbon footprinting and environmental risk reviews, we have put together services to help you prepare and then thrive.

At EEF, we are in a position to understand not only what businesses need to do to comply with the scheme, but also how they can gain competitive and financial advantage from this new emissions trading scheme.

Our services include:

In house management briefing & workshop

To ensure your management team fully understand the implications of the scheme, specific to your organisation. For large organisations, this is combined with a workshop session to identify key compliance risks within subsidiary companies and the need for a site specific readiness assessment.

Readiness assessment

An organisation based review, with site visit, designed to determine qualification status, ballpark budget implications and potential cost benefits of early action. The results of the review can be used to help develop an appropriate strategy.

Strategy Development

Once qualification status has been determined an appropriate strategy needs to be defined. Our experts can work with you to develop the best approach for your business, ranging from minimum compliance to maximising the benefits of full scale early action.

Implementation and management

EEF can co-ordinate all your CRC related activities through a retainer package. This can include registration, footprinting, data collection and validation across multiple divisions and subsidiaries, annual reporting, evidence packs, allowance purchase and trading, and early action metrics.

CRC compliance audit

Recommended for more complex organisations, we can undertake an independent compliance audit to ensure you are complying with all relevant requirements.

Early Action Metrics

We can identify whether you would benefit from undertaking early actions to improve your league table position in the first phase of the scheme. We can provide automatic meter reading through our energy partners and our advisers can help you gain the Carbon Trust Standard.

Emission reduction services

We can help you define and implement an emissions reduction programme across your business, using our network of energy and carbon management experts.

Emissions trading

We can advise on allowance purchase and trading.

Legal advice

Using our legal partners, we can provide advice on legal issues relating to the CRC for example regulatory issues relating to onsite generation, implications of CRC for M&A and due diligence, landlord/tenant issues.
